

T5 Polyester Bleeder & Breather Fabrics

■ Product description

T5 is a very light Polyester bleeder & breather fabrics, used on low temperature and middle temperature premolding and pre-absorption process.

Due to its low weight T5 is mainly used to bleed excess of resin and should be used in conjunction with a heavier breather to get required vacuum level. A release film should be used between T5 and the heavier breather.

Always use a release film between T5 and the component.

■ PROPERTIES

Maximum Use Temperature	200°C(392°F)
Fibre	Polyester
Standard Weight	102g/m ²
Flame Resistance	Standard

■ AVAILABILITY&PACKAGING

Standard Size	1.4m*137m(4.6'*150yard)
Incision	Can Be Customized
Packaging	Polyester Film Bag

■ Notes

Storage: In original packaging in a dry and cool place.

No skin irritation problems, no other special requirement.
