

WF10 Polyester Bleeder & Breather Fabrics

■ Product description

WF10 is a non woven polyester felt widely used in vacuum bagging process for cures in oven and autoclave up to 205°C (401 °F) .

WF10 is an economical version of our WF330 and despite it could be used up to 205°C (401 °F) we recommend our customers to use this breather at medium temperature and medium pressure, commonly 120°C (248 °F) and 3 bars.

His medium weight allows to breath air out from the vacuum bag and bleed excess of resin. In case of large excess of resin two or more plies could be used.

Always use a release film between the part and WF10.

■ PROPERTIES

| | |
|-------------------------|---------------------|
| Maximum Use Temperature | 205°C(401 °F) |
| Fiber | 100% Polyester |
| Solidity | 100% |
| Standard Weight | 310g/m ² |
| Standard Thickness | 5.5mm(0.217") |
| Colour | White |

■ AVAILABILITY&PACKAGING

| | |
|---------------|-----------------------------|
| Standard Size | 1.52m*50m(5.0*109yard)/roll |
| Incision | On Request |
| Packaging | Polyester Film Bag |

■ Notes

Storage: In original packaging in a dry and cool place.

No skin irritation problems, no other special requirement.
